RE: Formosa Plastics Corporation, Texas
TCEQ Air Quality Account No. CB-0038-Q
North FTIR Quarterly Report (April 2019 through June 2019)

Dear Air Section Manager:

Please find attached the North FTIR quarterly report. The North FTIR and associated equipment were installed as a Supplemental Environmental Project as required by TCEQ Docket No. 2000-1144-AIR-E. This report includes FTIR data from April 1, 2019 through June 30, 2019. This report is designed to be similar to the Point Comfort FTIR Quarterly Report in order to maintain reporting consistency.

During the second quarter of 2019, the north FTIR site had no confirmed exceedances of the trigger level based on [block] 30-minute averages or [running] 30-minute averages occurred.

Should you have any questions please contact Vanessa Peppers by e-mail at VanessaP@ftpc.fpcusa.com.

Sincerely,

Rick Crabtree
Vice President/General Manager
Formosa Plastics Corporation, Texas

To: Stephanie Schmidt-Mayfield

Subject: Formosa Point Comfort (FPC) and Formosa North (FNorth) Ambient Air
Monitoring Station (AAMS) Gas Challenge Results for April - June 2019

Gas challenges are performed weekly against the OP-FTIR instrument with gases containing the target compounds listed in Table 1. The number of gas challenges performed was limited by instrument and gas standard availability. Because of its corrosive nature, hydrogen chloride (HCl) was purchased in a separate cylinder and was injected in the calibration cell separate from the rest of the target compounds. The remaining target species, all being volatile organic compounds (VOCs), are contained within a single gas cylinder located at each site. Tables 1 and 2 list the challenge compounds and their expected spike concentrations. The expected spike concentrations are arrived at by multiplying the certified cylinder concentrations by the ratio of the calibration cell path length to the open path length (0.15m/270m at FNorth and 0.15m/314m at FPC). This would be the molecular density (concentration by volume) if the molecules in the cell were instead evenly distributed across the entire beam path.

Gas challenges were only able to be conducted for 3 days in April. Spectrum has determined that faulty solenoid valves are responsible for the loss of several challenge gases over the past several months. Due to the custom nature of these gas standards, the typical lead time from the manufacturer is approximately 2 months. Spectrum has purchased new standards which were transported to each site during the June 27th site visit. Spectrum has also ordered industrial grade solenoid valves which should hold up to the continuous duty cycle required with corrosive gases.

In the interim, Spectrum leaves the gas standard bottles closed and relies on a local contractor to open the bottles before performing QC challenges, and then closing the bottles once the QC challenge is completed. Gas challenges resumed on July 8, and while trying to have the contractor go to the sites weekly, scheduling conflicts occasionally arise and challenges must be delayed. Once the new solenoid valves arrive, they will be installed during the next site visit and more regular challenges will resume.

Table 1. Formosa North OP-FTIR Gas Challenge Mixtures

Compound	Compound FTIR Code	Expected Spike Level (ppm)
1,3 Butadiene	BUT	0.042
Benzene	C6H6	0.103
Ethylene	C2H4	0.041
Ethylene Oxide	ETO	0.081
Vinyl Chloride	VCl	0.041
1,2 Dichloroethane	EDC	0.082
Hydrogen Chloride	HCl	0.023

All of the gas challenges performed for the quarter resulted in acceptable recoveries at FNorth with the following exceptions:

- EDC recovered high on 4/25/2019

Table 2. Formosa FPC OP-FTIR Gas Challenge Mixtures

Compound	Compound FTIR Code	Expected Spike Level (ppm)
1,3 Butadiene	BUT	0.064
Benzene	C6H6	0.129
Ethylene	C2H4	0.066
Ethylene Oxide	ETO	0.129
Vinyl Chloride	VCl	0.064
1,2 Dichloroethane	EDC	0.129
Hydrogen Chloride	HCl	0.018

All of the gas challenges performed for the quarter resulted in acceptable recoveries at FPC

Analyte spike recovery is expressed as a percentage and calculated by taking the ratio of the actual spike value divided by the expected spike value. The actual spike is calculated by averaging the equilibrium points during a run.

Conclusion

Recovery statistics for the quarter are presented in Tables 3 and 4. At the bottom of the table, average recoveries for each compound (for the quarter) are given. Individual results are color-coded. **Green** highlights indicate that recovery fell within the 70% to 130% range, while results highlighted in **yellow** fell within a 50% to 150% range. Results outside of the 50% to 150% range are highlighted in **red**.

Table 3. Recovery Percentages Summary for 2nd Quarter 2019 at FNorth

2nd Quarter 2019 North FTIR Report - Summary of Validated Exceedances of the 30-Minute Trigger Levels
Validated Exceedances of the 30-Minute Block Averaged Trigger Levels**

Month/Year	Date*	Time	Chemical	Concentrations (ppb)	Trigger Limit (ppb)	Wind Speed (mph)	Wind Direction (degrees)
			There were no validated exceedances in the second quarter of 2019.				

Please Note: Polar plots generated by FPC-TXs' FTIR System are attached for those days when the FTIR System detected an exceedance.

* Indicates polar plot is available.

** The FTIR quarterly report format was agreed upon between TNRCC and FPC-TX upon initiation of the monitoring program. The quarterly report shows *block* averages for each 30-minute period throughout the day. The FTIR collects 5-minute data and creates *rolling* 30-minute averages. The table titled "Validated Exceedances of 30-Minute Running Averaged Trigger Levels" lists the exceedances of the 30-minute average trigger levels based on a *rolling* 30-minute average time period. The validated exceedances of the rolling 30-minute averages for the compounds listed in the table titled "Validated Exceedances of 30-Minute Running Averaged Trigger Levels" is being included in the summary table above, as required by paragraph 5, Section c of the January 10, 1996 letter from the TNRCC.
